

## Priority Queue :-

It is like a queue where the elements are stored based on the priority.

### Syntax:-

```
PriorityQueue<Type> pq = new PriorityQueue<>();
```

By default, element will be in ascending order.

### Methods:-

(i.) add(element) → It is used to add element to the priority queue.

(ii.) peek() → It will return element at front

(iii.) poll() → It removes element from the front.

(iv.) size() → It gives the size of a priority queue.

(v.) remove(element) → It removes the given element -

Add() in priority queue has time complexity as  $O(\log n)$

To arrange the elements in descending order

```
PriorityQueue<Integer> pq = new
PriorityQueue<>(Collections.reverseOrder());
```

PriorityQueue<Integer> pq = new PriorityQueue<>((a, b) → b - a);

# Priority

# Queue basics

```
1 import java.io.*;
2 import java.util.*;
3
4 public class Solution {
5
6     public static void main(String[] args) {
7         /* Enter your code here. Read input from STDIN. Print out
8         Scanner sc = new Scanner(System.in);
9         int t = sc.nextInt();
10        PriorityQueue<Integer> pq = new PriorityQueue<>();
11        for(int i=0;i<t;i++){
12            pq.add(sc.nextInt());
13            System.out.println(pq.peek());
14        }
15    }
16 }
```

# Maximum Product of Two elements in an array

$n = 4$

$\text{arr} = [3, 4, 5, 2]$

First largest = 5

Second largest = 4

$$\text{Product} = (5-1) * (4-1) = 4 \times 3 = 12.$$

`pq.add(arr[0]);`

`pq.add(arr[1]);`

`⋮`

`pq.add(arr[n-1]);`

`PriorityQueue<Integer> pq = new PriorityQueue<>(Collections.reverseOrder());`

`for (int i=0; i<n; i++) {`

`pq.add(arr[i]);`

`}`

`int firstLargest = pq.poll();`

`int secondLargest = pq.poll();`

`int product = (firstLargest - 1) * (secondLargest - 1);`

`S.O.println(product);`

minimum digits

$$n = 6$$

$$\underline{6, 8, 4, 5, 2, 3}$$

$$\begin{array}{r} 684 \\ 523 \end{array}$$

$$\begin{array}{r} 658 \\ 423 \end{array}$$

$$\begin{array}{r} 586 \\ 324 \end{array}$$

We have to get minimum possible sum

$$\begin{array}{r} 2, 3, 4, 5, 6, 8 \\ \underline{\underline{234}} \\ 568 \\ \hline 802 \end{array}$$

$$\begin{array}{r} 246 \\ 358 \\ \hline 604 \end{array}$$

$$\left. \begin{array}{r} 246 \\ 358 \\ \hline \end{array} \right\} \begin{array}{l} \leftarrow \text{num1} \\ \leftarrow \text{num2} \end{array}$$

$$\text{num1} = 0, \text{ num2} = 0;$$

$$\text{num1} = \text{num1} * 10 + \text{pq}. \text{poll}();$$

$$= 0 * 10 + 2 = 2$$

$$\text{num2} = \text{num2} * 10 + \text{pq}. \text{poll}()$$

$$= 0 * 10 + 3 = 3$$

$$\text{num1} = 2 * 10 + 4 = 24$$

$$\text{num2} = 3 * 10 + 5 = 35$$

$$\text{num1} = 24 * 10 + 6 = 246$$

$$\text{num2} = 35 * 10 + 8 = 358$$

S. O. P /n ( $\text{num1} + \text{num2}$ );

int num1=0, num2=0,

while(!pq.isEmpty()) {

    num1 = num1 \* 10 + pq.poll();

    if (!pq.isEmpty()) {

        num2 = num2 \* 10 + pq.poll();

}

Code:-

```
Scanner sc = new Scanner (System.in);  
Scanner sc = new Scanner (System.in);  
int n = sc.nextInt();  
for (int i=0; i<n; i++) {  
    pq.add(sc.nextInt());  
}  
  
int num1=0, num2=0;  
while (!pq.isEmpty()) {  
    num1 = num1 * 10 + pq.poll();  
    if (!pq.isEmpty()) {  
        num2 = num2 * 10 + pq.poll();  
    }  
}  
System.out.println(num1+num2);
```

Optimize while loop

```

int e0=0;
while (!pq.isEmpty()) {
    if (e0 % 2 == 0) {
        num1 = num1 * 10 + pq.poll();
    } else {
        num2 = num2 * 10 + pq.poll();
    }
    e0++;
}

```

0 0 0 7

$$00 + 07 = \underline{7}$$

0 1 4 5 =  
 0 4  
 1 5

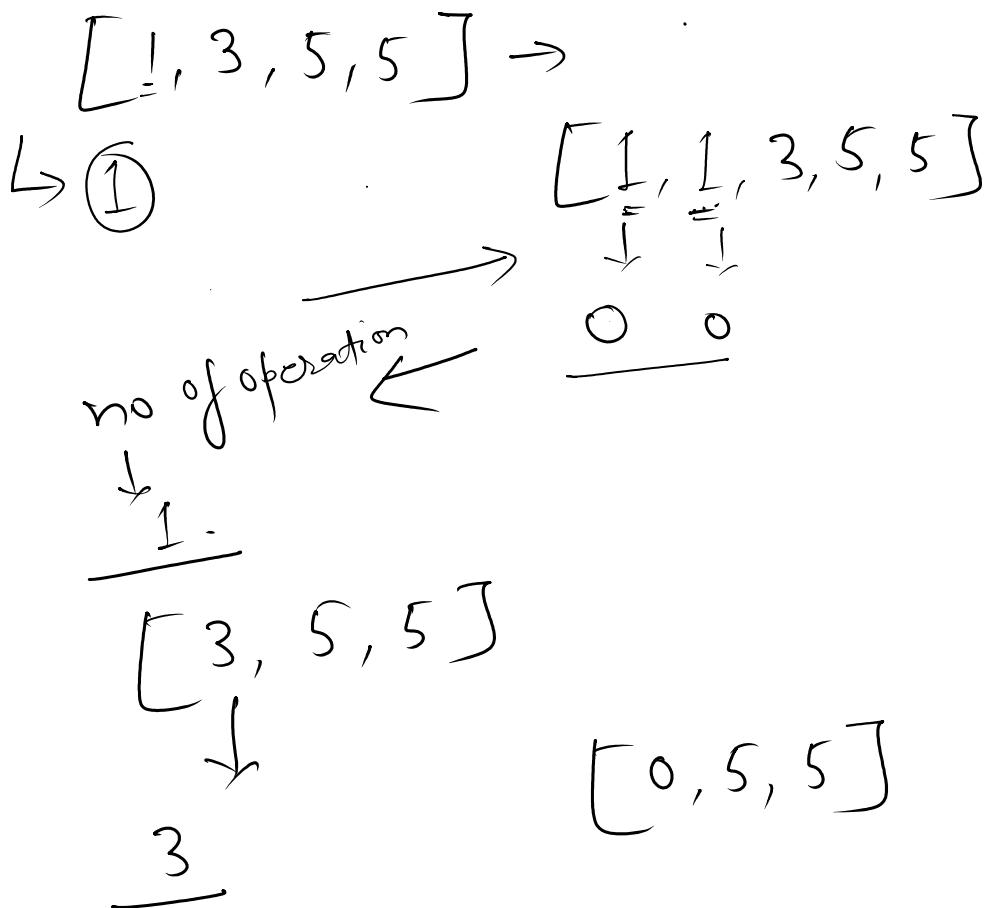

# Subtract numbers 1

$n=5$

$$\text{arr} = [1, 5, 0, 3, 5]$$

1. Create a priority queue and add all the non-zero elements.

$$\text{PQ.add()} \leftarrow 1, 5, 3, 5$$

$$\text{operation} = 2$$

$$\begin{array}{r}
 [5, 5] \\
 \downarrow \\
 5
 \end{array}
 \quad
 \begin{array}{r}
 [5, 5] \\
 \downarrow \quad \downarrow \\
 0 \quad 0
 \end{array}$$

P9  $\rightarrow [1, 1, 3, 5, 5]$   
 $\frac{\downarrow}{1}$        $\frac{\downarrow}{3}$        $\frac{\downarrow}{5}$   
 $\frac{1 \quad 3 \quad 5}{\text{1st} \quad \text{2nd} \quad \text{3rd.}}$

Using HashSet — — —

`HashSet<Integer> hs = new HashSet<>();`

```

HashSet<Integer> hs = new HashSet();
for (int i=0; i<n; i++) {
    if (arr[i] > 0) {
        hs.add (arr[i]);
    }
}
System.out.println(hs.size());

```

Using Priority Queue.

```

PriorityQueue<Integer> pq = new PriorityQueue<>();

```

```

for (int i=0; i<n; i++) {
    if (arr[i] > 0) {
        pq.add (arr[i]);
    }
}

```

1, 1, 0, 5, 3, 5

int ob = 0;              pq → [ 1, 3, 5, 5 ]

```

while (!pq.isEmpty()) {

```

    int value = pq.poll(); → 1

```

    while (!pq.isEmpty() && pq.peek() == value) {
        pq.poll();
    }
}

```

```
    pq.poll(),  
}  
op++;  
}
```

```
