

Convert 1D array into 2D Array

Input

$n \rightarrow$ size of array

$\text{arr}[]$ of size n

$p \& q$ input is the dimension of 2D array

$p \rightarrow$ no of rows

$q \rightarrow$ no of columns

$n = 9 \quad 0 \ 1 \ 2 \ 3 \ 4 \ 5 \ 6 \ 7 \ 8 \ 9$
 $\text{arr} = [1, 2, 3, 4, 5, 6, 7, 8, 9]$

$p = 3 \rightarrow$ row

$q = 3 \rightarrow$ col.

$$\begin{matrix} 0 & 5 & 9 \\ 2 & 7 & 5 \\ 2 & 3 & 3 \end{matrix} \quad \begin{matrix} \leftarrow \text{mat}[0] \\ \leftarrow \text{mat}[1] \\ \leftarrow \text{mat}[2] \end{matrix}$$

int mat[3][3] = new int[n][n];

for (int i=0; i<n; i++) {

rotate(mat[i], k);

}

→ Rotate/Shift array elements by k

2 pointer → reverse entire array

Technique → reverse (0 to k-1)

→ reverse (k to n-1)

arr[G][i]

Algorithm :-

1. Make an array of rows, $\text{row}[]$ and another array of columns $\text{col}[]$

2. Traverse the matrix

if, at any index we get 1.

$$\text{row}[i] = 1, \text{col}[0] = 1$$

$$\text{row}[0] = 1$$

$$\text{row}[0] = 1, \text{col}[3] = 1$$

$$\text{row}[1] = 1, \text{col}[2] = 1$$

$$- \quad - \quad 0 \quad 1 \quad 2 \quad 3$$

$$\text{row} = \begin{bmatrix} 0 & 1 & 2 \\ 1 & 1 & 0 \end{bmatrix}$$

$$\text{col} = \begin{bmatrix} 0 & 1 & 2 & 3 \\ 1 & 0 & 1 & 1 \end{bmatrix}$$

This gives information that which row and which col has 1.

3. Traverse entire matrix (Set all row with 1)

```
for (int i=0; i<row; i++) {
    if (row[i] == 1) {
        for (int j=0; j<col; j++) {
            arr[i][j] = 1;
        }
    }
}
```

4. Traverse the entire matrix (Set col with 1)
